

“2TEACH-2TOUCH” PROJECT

on the way of sustainability

Co-funded by
the European Union

6 partners and 6 countries are involved in the project:

- EBB Europass Berlin (Germany),
- SBTC (Turkey),
- ELC, European Language center (Spain)
- Archivio della Memoria (Italy)
- TUS University (Ireland)
- Danmar Computer (Poland)

INFEBRUARY 2023 WE HAVE PUBLISHED OUR SECOND MODULE OF THE “2TEACH 2TOUCH” PROJECT

We are excited to announce our latest module of our Massive Open Online Course (MOOC) on Waste Reduction and True Consumption. This module has been realised in the framework of the 2Teach2Touch Erasmus+ project, and is designed for citizens who are interested in adopting environmentally responsible practices into their everyday life. We have already published the first module about Participation in the Waste Economy as a citizen and in a few days the second module about Waste Reduction and True Consumption will be released on our website.

This module is the second of a series of 4 about **waste management, circular economy, and environmental-friendly practices to be implemented in households.**

As the world faces ever-increasing environmental challenges, it is becoming increasingly important to equip citizens and adult learners with the skills and knowledge they need to take action and make a positive impact on the environment. This module will provide participants with a comprehensive understanding of environmental education about waste reduction and circular economy, and explore practical strategies for integrating environmental themes into everyday life.

During the course, learners will have the opportunity to:

- Explore the principles of environmental education in promoting environmental sustainability
- Learn about innovative approaches to circular economy in different countries
- Develop practical strategies for incorporating environmental themes into independent initiatives, and in everyday life.

The modules are self-paced, so you can complete the course at your own time.

The course is also flexible, allowing participants to complete the whole course or to focus on specific modules based on their own interests and needs. The first two modules are now available in English but at the end of the projects they will all be translated also in German, Italian, Spanish, Polish and Turkish.

We believe that this MOOC will be a valuable resource for whoever is committed to promoting environmental sustainability and empowering citizens and stakeholders to make a positive impact on the world. We hope that you will join us for this exciting learning opportunity.
